Task 1 : Prediction using Supervised Machine Learning

GRIP @ The Spark Foundation

In this regression task I tried to predict the percentage of marks that a student expected to score based upon the numbers of hours they studied

CSV_Data can be found at http://bit.ly/w-data

Name Manish Singh

1. Importing Required Libraries

In [3]:
```
# Importing the required Libraries
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LinearRegression
print(" All required packages included successfully!")
```

```
 All required packages included successfully!
```

2. Reading the data from Data Source

In [4]:
```
# Reading Data From Remote Link
url = r"https://raw.githubusercontent.com/AdiPersonalWorks/Random/master/student_scores%20-%20student_scores.csv"
s_data = pd.read_csv(url)
print ("Data import Successfully")

s_data.head(10)
```

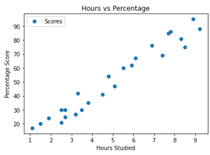
```
Data import Successfully
```

Out[4]:

	Hours	Scores
0	2.5	21
1	5.1	47
2	3.2	27
3	8.5	75
4	3.5	30
5	1.5	20
6	9.2	88
7	5.5	60
8	8.3	81
9	2.7	25

3. Data Visualization

In [5]:
```
# Plotting the distribution of scores
s_data.plot(x= 'Hours', y= 'Scores', style = 'o')
plt.title('Hours vs Percentage')
plt.xlabel('Hours Studied')
plt.ylabel('Percentage Score')
plt.show()
```



3. Data Preprocessing

In [6]:
```
X = s_data.iloc[:, :-1].values
y = s_data.iloc[:, 1].values
```

4. Model Training

In [7]:
```
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size= 0.2, random_state = 0)
regressor = LinearRegression()
regressor.fit(X_train.reshape(-1,1), y_train)

print("Training Complete")
```

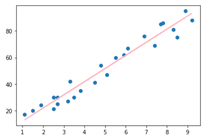
```
Training Complete
```

5. Plotting the line of regression

In [8]:
```
# Plotting the lines of regression

line = regressor.coef_*X+regressor.intercept_

# Plotting  for the test data
plt.scatter(X, y)
plt.plot(X, line,color='lightpink');
plt.show()
```



6. Making Predictions

In [9]:
```
# Testing data

print(X_test)
#Model Prediction
y_pred = regressor.predict(X_test)
```

```
[[1.5]
 [3.2]
 [7.4]
 [2.5]
 [5.9]]
```

7.Comparing Actual Result to the Predicted Model Result.

In [10]:
```
# Comparing Actual Vs Predicted Result

df = pd.DataFrame({'Actual' : y_test, 'Predicted' : y_pred})
df
```

Out[10]:

	Actual	Predicted
0	20	16.884145
1	27	33.732261
2	69	75.357018
3	30	26.794801
4	62	60.491033

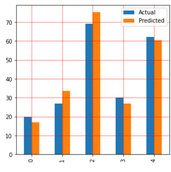
In [11]:
```
# Estimating training and test score

print("Training Score:",regressor.score(X_train,y_train))
print("Test Score:",regressor.score(X_test,y_test))
```

```
Training Score: 0.9515510725211552
Test Score: 0.9454906892105356
```

In [13]:
```
# Plotting the bar graph to depict the difference between the actual and predicted values.

df.plot(kind='bar', figsize=(5,5))
plt.grid(which='major',linewidth= '0.5',color='red')
plt.grid(which='minor',linewidth ='0.5',color='blue')
plt.show()
```



In [14]:
```
# Tetsing the model with our own data

hours = 9.25
test = np.array([hours])
test = test.reshape(-1,1)
own_pred = regressor.predict(test)
print("No of Hours = {}".format(hours))
print("Predicted Score = {}".format(own_pred[0]))
```

```
No of Hours = 9.25
Predicted Score = 93.69173248737538
```

8. Evaluating the model

The final step is to evaluate the performance of algorithm . This step is particularly important to compare how well different algorithm performs on a particular Dataset. Here different error have been calculated to compare the model performance and predict the accuracy.

In [15]:
```
from sklearn import metrics
print('Mean Absolute Error:',metrics.mean_absolute_error(y_test,y_pred))
print('Mean Squared Error:',metrics.mean_squared_error(y_test,y_pred))
print('Root Mean Squared Error:',np.sqrt(metrics.mean_squared_error(y_test,y_pred)))
print('R-2:', metrics.r2_score(y_test, y_pred))
```

```
Mean Absolute Error: 4.183859899002975
Mean Squared Error: 21.5987693072174
Root Mean Squared Error: 4.647447612100366
R-2: 0.9454906892105356
```

R-2 gives the score of model fit and in this case we have R-2 = 0.9454906892105356 which is actally great score for this model.

9. Conclusion

I was successfully able to carry-out Prediction using Supervised ML task and was able to evaluate the model's Performance on various Parameters.

THANK YOU SO MUCH!!
